Causal Inference For Statistics, Social, And Biomedical Sciences: An Introduction

Synopsis

Most questions in social and biomedical sciences are causal in nature: what would happen to individuals, or to groups, if part of their environment were changed? In this groundbreaking text, two world-renowned experts present statistical methods for studying such questions. This book starts with the notion of potential outcomes, each corresponding to the outcome that would be realized if a subject were exposed to a particular treatment or regime. In this approach, causal effects are comparisons of such potential outcomes. The fundamental problem of causal inference is that we can only observe one of the potential outcomes for a particular subject. The authors discuss how randomized experiments allow us to assess causal effects and then turn to observational studies. They lay out the assumptions needed for causal inference and describe the leading analysis methods, including, matching, propensity-score methods, and instrumental variables. Many detailed applications are included, with special focus on practical aspects for the empirical researcher.

Book Information

Hardcover: 644 pages

Publisher: Cambridge University Press; 1 edition (April 6, 2015)

Language: English

ISBN-10: 0521885884

ISBN-13: 978-0521885881

Product Dimensions: 7 x 1.3 x 10 inches

Shipping Weight: 2.8 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars [See all reviews](#) (7 customer reviews)

Best Sellers Rank: #77,756 in Books (See Top 100 in Books) #54 in [Books > Medical Books > Research](#) #80 in [Books > Textbooks > Medicine & Health Sciences > Research](#) #107 in [Books > Politics & Social Sciences > Social Sciences > Research](#)

Customer Reviews

Awesome possum. Easy to read primer from two innovators in this field. No brainer acquisition for Academics and practitioners alike. 4 thumbs up!

A great book. It has careful and easy (to follow) arguments that help to understand interesting situations.

Imbens & Rubin are masters.

Recommended strongly by Prof. Strauss, really the best!
