Photopolymerization: Fundamentals And Applications (ACS Symposium Series)

Synopsis

This valuable reference examines the fundamental aspects of acrylate systems used in commercial photopolymerization, and investigates advanced analytical systems that characterize acrylate and non-acrylate systems. The new non-acrylate systems covered include free radical, cation, and charge-transfer photopolymerizations. The book also discusses emerging applications for this technology in photoresists, orthopedic cements, fiber-filled composites, and electro-optic materials.
