Chemistry: The Molecular Science

Synopsis

Your students will be engaged in the active study of chemistry with CHEMISTRY: THE MOLECULAR SCIENCE, Fourth Edition. Authors Moore, Stanitski, and Jurs infuse their text with timely applications that reveal chemistry as a lively and relevant subject that is fundamental to a broad range of disciplines such as engineering, biology, and environmental science. The Fourth Edition features an enhanced problem-solving methodology, a complete revision of its award-winning art program to even better help students visualize chemical processes at a molecular level, integrated coverage of organic and biochemistry content, and full media integration with OWL Online Web Learning and Go Chemistry. New content, more visualization problems, updated applications in a wide range of disciplines, and unique new end-of-chapter "grid" questions based on award-winning chemistry education research have been added throughout the text. In addition, many of the book's end-of-chapter questions are accompanied by interactive, assignable, online lessons in OWL--the #1 online learning system for chemistry.

Book Information

Hardcover: 1264 pages

Publisher: Cengage Learning; 4th edition (March 5, 2010)

Language: English

ISBN-10: 1439049300

ISBN-13: 978-1439049303

Product Dimensions: 10.9 x 8.7 x 1.8 inches

Shipping Weight: 6.2 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars [See all reviews](#) (20 customer reviews)

Best Sellers Rank: #506,344 in Books (See Top 100 in Books) #46 in [Books > Science & Math > Chemistry > Molecular Chemistry](#) #1288 in [Books > Science & Math > Chemistry > General & Reference](#) #1320 in [Books > Textbooks > Science & Mathematics > Chemistry](#)

Customer Reviews

I am a grad student going into chemistry with a completely unrelated background. Thus, I have to give myself an undergrad in chemistry to catch up with everyone else. I purchased all of the book that reviews seemed to most favor: 1) Chemistry by Moore, Stanitski, and Jurs 2) Biology by Campbell Reece 3) Organic Chemistry by Wade 4) Biochemistry by Voet & Voet (not most favored, but deemed most comprehensive) 5) Physical Chemistry by McQuarrie This book, Chemistry by Moore, Stanitski, and Jurs, I read cover to cover in 8 weeks...and it was not hard. I had plenty of

time to run out and goof off. It is written such that it is fantastically easy to understand the material. However, as I was reading, I found that much of what I read in later chapters conflicted with previous chapters. Truly, I spent half of my time reading the book, and half of my time online trying to figure out how this stuff REALLY works. The catch is: all of this stuff I had learned before, in my high school & 1st semester college intro chemistry courses. It seems that all intro chem courses & books work to give you a dumbed down & unfortunately oversimplified view of chemistry. The other unfortunate thing is: I'm not sure of any better source to get your introductory chemistry knowledge from. I did actually learn quite a bit that this book failed to teach me or gave me an oversimplified view from Voet & Voet's introductory chapters. I tended to run out to wikipedia a lot to try and straiten things out, but I find that it (usually) doesn't give an accurate view either (though it does give a different view).
