The Hour Of Eugenics": Race, Gender, And Nation In Latin America

Synopsis

Eugenics was a term coined in 1883 to name the scientific and social theory which advocated "race improvement" through selective human breeding. In Europe and the United States the eugenics movement found many supporters before it was finally discredited by its association with the racist ideology of Nazi Germany. Examining for the first time how eugenics was taken up by scientists and social reformers in Latin America, Nancy Leys Stepan compares the eugenics movements in Mexico, Brazil, and Argentina with the more familiar cases of Britain, the United States, and Germany. In this highly original account, Stepan sheds new light on the role of science in reformulating issues of race, gender, reproduction, and public health in an era when the focus on national identity was particularly intense. Drawing upon a rich body of evidence concerning the technical publications and professional meetings of Latin American eugenicists, she examines how they adapted eugenic principles to local contexts between the world wars. Stepan shows that Latin American eugenicists diverged considerably from their counterparts in Europe and the United States in their ideological approach and their interpretations of key texts concerning heredity.

Customer Reviews

I used this book for a senior thesis paper. It was a good starting point for an overview of eugenics in Latin America. The downside to this book is that most of the information is a little old and a lot more has been written. What I really like about this book is that it lead me to other sources.

I still haven't finished reading, but I can tell already that the book is a very professional work of

research.

There is mold on the back cover of the book.
