Physical Chemistry For The Chemical Sciences

Synopsis

Following in the wake of Chang's two other best-selling physical chemistry textbooks (Physical Chemistry for the Chemical and Biological Sciences and Physical Chemistry for the Biosciences), this new title introduces laser spectroscopist Jay Thoman (Williams College) as co-author. This comprehensive new text has been extensively revised both in level and scope. Targeted to a mainstream physical chemistry course, this text features extensively revised chapters on quantum mechanics and spectroscopy, many new chapter-ending problems, and updated references, while biological topics have been largely relegated to the previous two textbooks. Other topics added include the law of corresponding states, the Joule-Thomson effect, the meaning of entropy, multiple equilibria and coupled reactions, and chemiluminescence and bioluminescence. One way to gauge the level of this new text is that students who have used it will be well prepared for their GRE exams in the subject. Careful pedagogy and clear writing throughout combine to make this an excellent choice for your physical chemistry course.

Customer Reviews

This is the international version of the book as they do not yet print it in paperback format. However, the numbers for the example/homework problems are the same, so it's a good deal! It came in a timely manner, which is always nice, and my only concern with this book was that it was a different version than the one I needed, but it turned out to be okay!

Exactly as dexcribed

Excellent price. Excellent book condition. Hope to do business with you again. Thank you.
