Customer Reviews

There is nothing wrong with this book, but everything with its "product description". As you will note when clicking on the Copyright page, this is a reprint of a 1942 book by Glasstone; it is by now two-thirds of a century old. Yet the product description does not state so explicitly, but merely copies the 1942 introduction, which talks about the "present state of development" of electrochemistry, and expresses the hope that "the reader will acquire the modern view in electrochemistry". That was indeed the object of this book in 1942; the object of reprinting this introductory statement now is clearly to mislead the prospective buyer.
