In 1957 when Jessy Park was born (called "Elly" in this book, but later identified by her mother in the sequel "Exiting Nirvana"), very little was known about autism. Elly/Jessy presented behavior that Kanner described more than a decade earlier (1943) when he first coined the term "autism." Elly/Jessy was largely nonverbal for much of her childhood and had difficulty connecting names to people. She loved mathematics and could do complex equations and recognized many polygons. She developed a fascination for counting that has since stayed with her. In 1961, Elly/Jessy then nearly 4 was formally diagnosed with autism. She was enrolled in special needs programs and made progress. She also as is noted in "Exiting Nirvana" proved to be a very talented artist. This is an excellent book that chronicles in minute detail autistic behavior and a family's love and acceptance. Elly/Jessy's three older siblings love her unconditionally as do their parents. Theirs is an intellectual family whose literary pursuits are quite evident throughout this account. It is one of the best early personal accounts of autism in a family. What makes this book unique is that when it was published, it rightfully challenged the parent blaming routine that was the order of the day. Elly/Jessy had three neurotypical (NT) siblings which automatically flies in the face of the disproven and completely asinine parent blaming. At no time was she neglected. She was loved, nurtured,

encouraged and accepted. Her special interests in counting and polygons are recognized as an asset, an ability. Fortunately, she is not charged with "perseverating," a harmful and damning word that has caused more harm than it ever helped.
