Twelfth Planet: Book I Of The Earth Chronicles (The Earth Chronicles)
Synopsis

Over the years, startling evidence has been uncovered, challenging established notions of the origins of life on Earth — evidence that suggests the existence of an advanced group of extraterrestrials who once inhabited our world. The first book of the revolutionary Earth Chronicles series offers indisputable documentary evidence of the existence of the mysterious planet Nibiru and tells why its astronauts came to Earth eons ago to fashion mankind in their image. The product of more than thirty years of meticulous research, The 12th Planet treats as fact, not myth, the tales of Creation, the Deluge, the Tower of Babel, and the Nefilim who married the daughters of man. By weaving together the biblical narrative with Sumerian and Babylonian clay-tablet texts, it challenges the established notions of the origins of Earth and mankind, and offers a compelling alternative history and prehistory of both.

Book Information

Mass Market Paperback: 464 pages
Publisher: Harper; Reprint edition (March 27, 2007)
Language: English
ISBN-10: 0061379131
Product Dimensions: 4.2 x 0.9 x 6.8 inches
Shipping Weight: 7.8 ounces (View shipping rates and policies)
Average Customer Review: 4.3 out of 5 stars — See all reviews (706 customer reviews)

Customer Reviews

Sitchin, if you didn't know it already, is one of the leading figures in alternative archaeology and science in general. These days, and especially the last 30-40 years, a "new wave" of scientists and non scientists alike has risen with the intention of re-examining what we as a species consider "knowledge", knowledge about what we are, and where we come from. Sitchin, being one of the few people in the world who can actually read Sumerian, has spent his life examining our origins, and his conclusions have little to do with apes descending trees and miraculously evolving into humans. In the "12th planet", his most famous of his altogether 9 books, he suggests that we are actually the
creation of an alien race which landed on earth more than 450 millenia ago, and who created us as 
slave labor for their purposes on this planet back then. From then on, and through a myriad 
interdevelopments and influences, we developed to what we are today. Sure, this sounds 
controversial, and to most people content with swallowing mainstream teachings for "facts" this 
might seem as pure science fiction. You would have to read this book before you term it as such 
though. It is an exhausting book too, as the author needs to use literally 100s of quotes on original 
translations he's made in order to make his argument and this isn't just any argument, you 
understand... Exhausting as this book might then be at times, the reward is immense, to put it very 
mildly. Even if Sitchin happens to be wrong on half of his conclusions what he suggests is mind 
blowing and shatters to bits most of our current beliefs. More importantly, Sitchin can serve you as a 
gateway to new paths of thinking.

This is the first book of "The Earth chronicles" series in which Zecharia Sitchin tears the man’s 
origins apart and puts them in a whole new perspective. Author is one of the top scholars in field of 
the ancient languages and offers his vision of extraterrestrial origins of Homo sapiens on Earth. His 
main point is that all ancient documents are written on the base of observations and facts and 
should not be taken symbolically. As we presume today, civilization has originated in Mesopotamia, 
but no one can really explain the fact that right from its start it was highly developed, that it 
blossomed virtually out of nothing and created incredible works, which we are not capable of 
performing even to date. Sitchin quotes many ancient documents, mostly Bible and Epic of 
Gilgamesh (which he read in Akkadian and Babylonian) and offers more sensful translation of these 
scripts. He also explains discrepancies of single/plural God in the Genesis and shows how the 
extraterrestrial wisdom has spread over other countries (Egypt, Greece, India...). Gods came from 
planet Nibiru (or Marduk in Babylonian), which has been created for special task: to bring order in 
our, at the time overcrowded solar system. After crushing Tiamat and forming Earth and Moon, 
planet Nibiru went on his comet-like journey, returning to the Sun in every 3,600 years. Life has 
formed and developed on it and some 450,000 years ago they noticed that our planet has some 
resources they desired. So they established settlements on Earth in range of Mesopotamia, 
because it is very rich with fuels, needed for space travelling. Man was created with genetic 
manipulation after their image (they mixed hominid’s genes with their own in order to obtain higher 
IQ level) to do the mining work for them.

Okay, I can buy the idea that the Earth might have been visited by alien cultures in the distant past
(in fact, considering what a fascinating species we obviously are, I'd be surprised if they hadn't.) I can also buy off on the idea that these ancient visitors might have been worked into the mythology of many cultures. I'm even open to the idea that life was 'seeded' on this planet and that homo sapiens may be the result of some ancient genetic engineering. My problem is I can't buy off that all this occurred via a rogue planet that is in orbit around our own sun and that passes by every three-and-a-half millennia to 'help us along' the evolutionary path. I have respect for Sitchin as a researcher and expert in ancient manuscripts, and I found much in this book to ponder. However, he makes the mistake most ufologists do in taking ancient texts as literal historical documents about real people and events rather than as fictionalized epics of antiquity. While he does at points recognize the metaphorical nature of some of their writings, he takes the ancient Sumerians far too literally, and strikes me as a man espousing a theory in search of evidence. His theory is simply too fantastic to be taken seriously and, while he makes a far more sophisticated attempt at demonstrating his thesis than Von Daniken, he makes many of the same mistakes Chariots of the Gods makes. For example, he has the residents of this twelfth planet (actually, the tenth, for he counts the moon and the sun as planets as well) fly to earth in spacecraft and have the means to genetically alter early primates, but then they travel about by means of paddle boats and utilize 19th century extraction techniques to pull gold from mines in Africa.
